

## Features

- Two wire system
- Piezoresistive measuring element
- Pressure measurement relative or absolute
- Output signal 4-20 mA, adjustable within 1 : 4 of the original measuring range
- Conformity error  $\leq \pm 0.1$  % FS
- Standard DIN measuring ranges from 0 ... 100 mbar up to 0 ... 160 bar or selection of measuring ranges in mWC or psi
- Temperature compensation within -10°C ... +50°C [+14°F ... +122°F] or -25°C ... +85°C [-13°F ... +185°F]
- Optional overvoltage (lightning) protection according to EN 61000-4-5
- Compact and robust

## Parameterisation

With the aid of the programming kit MPPKIT available as an accessory, the software of the pressure transmitter can be parameterised with a PC (see also Data Sheet 21.210.0066900.001 and Operating Instructions 21.810.0066900.001).

- Range selection for output current 4 ... 20 mA

With the range selection 4 ... 20 mA, the 4 mA and 20 mA current values can be assigned to measured values other than the standard 0% and 100% of the nominal measuring range. (Typically with 4 mA a value from the range -5% ... +25% of the nominal measuring range, with 20 mA, a value from the range +25% ... +105% of the nominal measuring range.) In this way, a sub-range or even a negative pressure can be measured. The difference  $\Delta$  between the minimum and maximum must amount to at least 25% of the nominal measuring range and be at least 50 mbar.

Inverted control can be achieved by exchanging the values for 4 mA and 20 mA.

The ranges of adjustability are presented graphically in the following illustrations:

Non-inverted Control:

Inverted Control:

- Programmable Damping of the Current Output

The analog output can be damped with a low pass filter of the 1st order. The adjustability enables values between ~ 33 ms (default) and 10 s.

Note: During commissioning, damping is preferably left at the minimum value.

- Recalibrating the transmitter (calibration 0 % or 100 %) enables compensation of the drift which inevitably occurs with resistive pressure transducers. The zero drift alone or the combination of zero drift and slope change can be compensated. In doing so, the original calibration of the transmitter is not lost and can be recalled as necessary.

Setting range 0%: -5% ... +5% of nominal measuring range (FS) with relative measuring probes  
 0% ... +5% of nominal measuring range (FS) with absolute measuring probes

Setting range 100%: 95% ... 105% of nominal measuring range (FS)

## Standard Settings

The transducers have the following standard parameterisation:

- Current range: 4 ... 20mA
- Measurement start: 4 mA = 0% of nominal measurement range (FS)
- Measurement end: 20 mA = 100% of nominal measurement range (FS)
- Damping: ~ 30 ms

### Block Diagram / Electrical Connections

DIN 43650: +Vin = Pin 1  
Pout = Pin 2

Binder 723: +Vin = Pin 3  
Pout = Pin 1

### Note

- The load resistance  $R_L$  is the sum of load and cable resistance.
- In order to prevent destruction, the membrane must not be touched.
- For applications in the field with extension cables having a cable length  $\geq 5$  m [16 ft.] or inside a building with cable lengths  $\geq 100$  m [330 ft.], a transmitter with the overvoltage protection option and an external overvoltage protection PT1x2-24DC-SET or a junction box NLAD.MPG (at other end of the cable) must be used.
- The cable shield must be connected to a good ground potential.
- In order to compensate the long term drift an annual zero point alignment is recommended.
- Conversion table for pressure units  
(value in new unit) = coefficient x (value in old unit)

coefficient	new unit						
old unit	Pa = 1 N/m <sup>2</sup>	bar	mWC	ftWC	mmHg (Torr)	psi	kp/cm <sup>2</sup> = at
Pa = 1 N/m <sup>2</sup>	1	10 <sup>-5</sup>	1.02 x 10 <sup>-4</sup>	3.35	7.5 x 10 <sup>-3</sup>	1.45 x 10 <sup>-4</sup>	1.02 x 10 <sup>-5</sup>

psi	6.89 x 10 <sup>3</sup>	6.89 x 10 <sup>-2</sup>	0.703	2.31	51.7	1	7.03 x 10 <sup>-2</sup>
kp/cm <sup>2</sup> = at	9.81 x 10 <sup>4</sup>	0.981	10	32.8	736	14.2	1

Application example 2 bar = ? psi:  
bar = "old unit", psi = "new unit",  $\Rightarrow$  "coefficient" = 14.5  
2 bar = 14.5 x 2 psi = 29 psi
